## **Power Pet**® Automatic Pet Door

### Motor Assembly Replacement Instructions

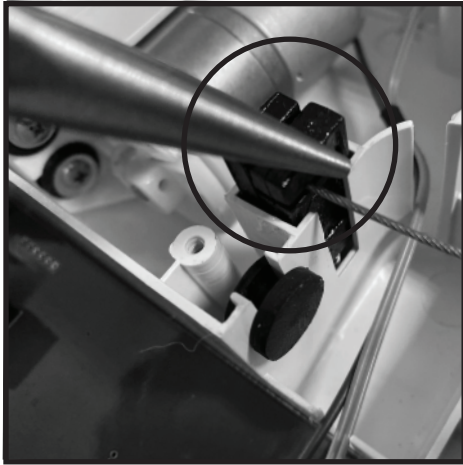

Motor Assembly for  
PX-1 & PX-2 Doors

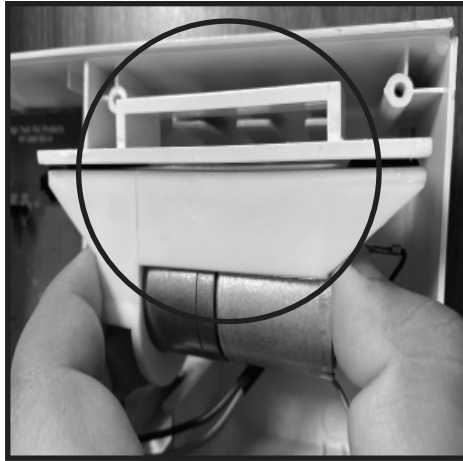

Engineered in the U.S.A.

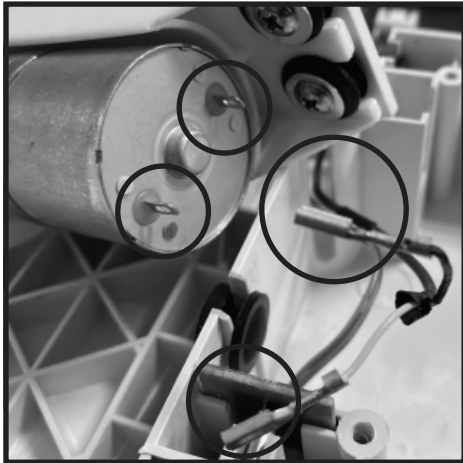

## Replacement Instructions

**3.**

**4.**

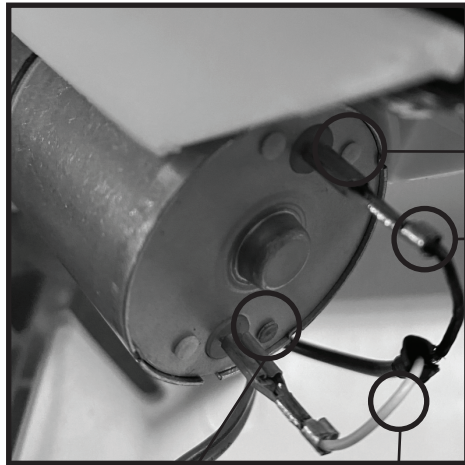

**5.**

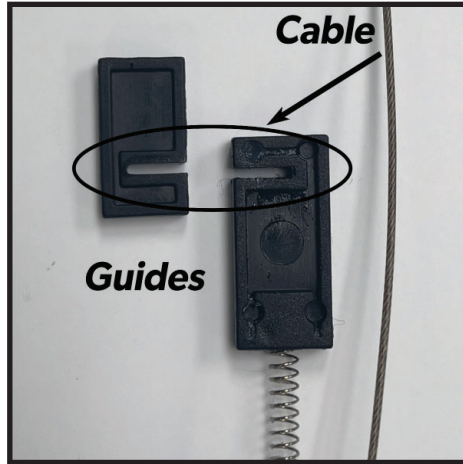

**6.**

1. Remove mounting screws to remove your door from a door, wall, or patio panel - remove 8 screw cap covers , 4 on each side to access the mounting screws.
2. Lay face down on a soft surface, then remove all back panel screws to remove the back panel. \*Make note of screw locations as not all of the screws are the same size.
3. Remove the 2 black cable guides that the cable runs through.
4. Pull the motor out from the holding bracket slightly.
5. Remove the wires on the right hand side of the motor - a black and a white cable by gently pulling each of them off.
6. Take a flat head screwdriver to gently pry the white cable spool assembly from the left side of the motor and set it aside.
7. Once those steps are completed, you will follow the same steps in reverse with the new replacement motor.
8. Put the pulley back onto the left side of the new motor by it firmly into place.

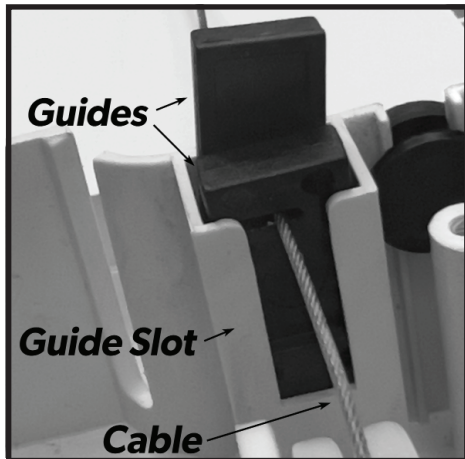

## Instructions Continued

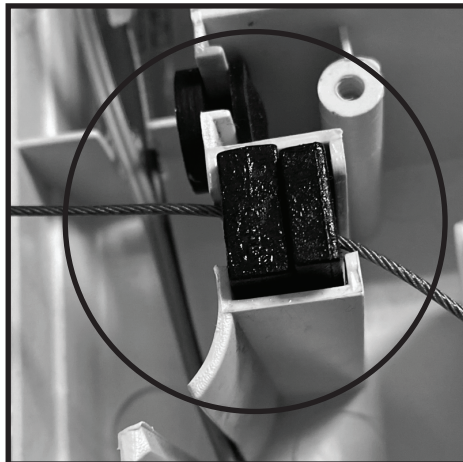

**9.** Red Dot White Cable

**11.**

**12.**

**13.**

9. Connect the wires back onto the right side of the new motor  
\*Important : connect the white cable to the red dot and the black cable to the white dot.

10. Slide motor back into the holding bracket.

11. Follow the cable guides placement as shown.

12. Place the cable and cable guides back into place.

13. Place cable guides in place with cable threaded through cable guide slots as shown in image.

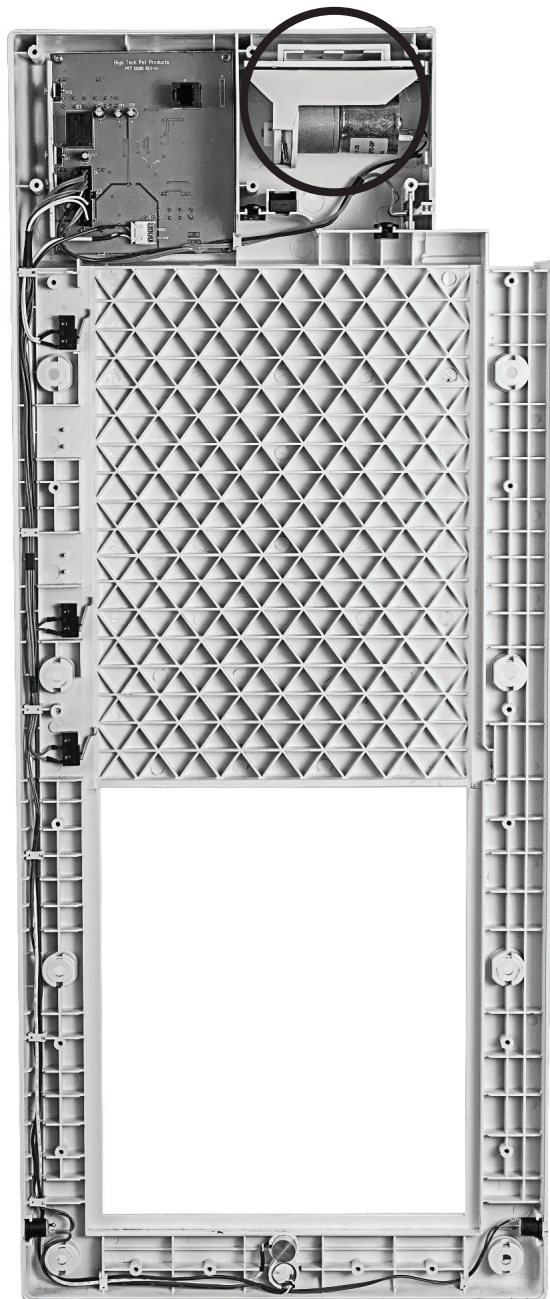

14. Reattach the back panel, make sure to not overtighten the back panel screws, then stand the door up straight and press the "open" button on your control panel to test that it is functioning properly.
